REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The reasons for allowance are the amendments made in the reply filed 03/02/2006 and Applicant's remarks therein.

Specifically, the prior does not teach or suggest specific timing for the *completion* of the write request. For instance, multiple references in the prior art teach avoiding the precharge/activate page conflict delay by interleaving a request to a different bank. However, these references do not teach or suggest timing relationships between the completion of the interposed request and the original second request. This is typically because the interposed request is to a different bank than the original second request, and should be independent. Further, the timings of read and write requests are generally different. I.e., a write request generally takes longer to complete than a read request. Therefore, waiting for a independent write request before issuing a read to a different bank is not disclosed. Further, the timing and length of read and write requests are heavily dependent on the memory used. For instance, it is well known that different memories are able to access data with differing latencies. Therefore, a relation of the timing between the completion of one request and the issuance of another in independent banks of memory are generally not taken into account. Many of the prior

art references disclose that the original second read request is **issued** after the **issuance** of the interposed write request, but not after the **completion** of the interposed write. Therefore, the claims are seen to be allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
